BRIEF HISTORY OF WESTERN SUPER-X

Western Cartridge Co. of East Alton Illinois first introduced the Super-X brand of cartridges in Jan.1931. They were first produced in short, short hollow point, long rifle, long rifle hollow point, WRF and WRF hollow point. In March 1931, long and long hollow point were introduced. Product codes were first seen in 1935. EXTRA CLEAN WAX COATED in red on the top of the box started in 1937. In 1941, Western introduced the CLAY TARGET shot cartridge with a new product code of K 1268R. The red Western logo on the bottom of the box ended in late 1941.

In 1946, Western Cartridge Co. became a Division of Olin Industries. Also in 1946, long hollow point was dropped from the product line. In Jan. 1947, WRF hollow point was dropped from the product line, and product code K 1268R was changed from CLAY TARGET to long rifle shot. The last name used on the boxes was Winchester-Western Division, Olin Mathieson-Chemical Corporation, this came in 1955.

In 1960, one of the longest running box labels came to an end. The top of these boxes did not change much since 1931 but some of the fine print did---- pay close attention to detail when you are collecting these boxes.

There are 254 different Super-X boxes in this catalog I know there are more out there so keep looking . No one has them all.

Western Now Gives You a

LONG RANGE

.22 Cartridge

Fifty per cent more power, coupled with 26% more speed, gives the *Super-X* .22 a much longer range than was believed possible of small-bore ammunition. It shoots with greater accuracy than you had ever hoped for. At 50 to 100 yards you can get small game with certainty. Your bullet doesn't merely hit its mark. It *crashes* into it! All this is the result of DOUBLE ACTION POWDER, one of WESTERN'S newest and greatest developments.

You'll know your .22 rifle is doing real, big-league shooting the moment you fire your first *Super-X* .22. In the first place, the report will not be the familiar "pop," but a loud, sharp BARK! Then you'll hear the bullet's *Z-zzzzzzz-i-n-g* all the way down the range. You'll feel a pleasant, business-like "kick" at your shoulder.

You can't mistake the *Super-X* .22. Its golden Labloy (lubricating alloy) bullet is greaseless. Its case is shining nickel

plate. Its priming is WESTERN'S famous Non-corrosive, which keeps the gun bore clean and rust-free. Get a box of *Super-X* Long Range .22's from your dealer today. Four sizes: .22 Short, .22 Long, .22 Long Rifle and .22 W. R. F. Also, Hollow-Point Bullets in all sizes. An interesting leaflet about these remarkable cartridges will be sent free if you write:

WESTERN CARTRIDGE COMPANY
421 Hunter Ave., East Alton, Ill.
Branch Offices: Jersey City, N. J.; San Francisco, Cal.

DOUBLE ACTION POWDER

Force or energy applied to a moving object drives it forward with greater speed than the same amount of energy applied when the object is stationary. That is the principle of Western's new Double Action powder. Double Action powder first starts the bullet on its way—the pressure behind it is then rapidly increased, driving the moving bullet forward with much greater speed and energy. This new, exclusive principle makes possible the remarkably increased effectiveness of *Super-X* .22's without dangerous increase in pressure, and permits their use with safety in any standard rifle.

1931 magazine ad for Western Super-X Long Range .22 Cartridges

SUPER-X

Possible prototype box or pre-production box. The two piece full cover box is buff in color and rubber stamped. Boxes exist with 13DM62 or 15DM62 rubber stamped on bottom. The box is sealed so the contents are unknown.

Super-X .22 L. R. cartridges have 26% increased velocity and 50% increased energy. This increases the recoil absorbed by the arms in which they are fired. Because the recoil springs of AUTOMATIC PISTOLS are too weak, we do not recommend Super-X .22 Long Rifle cartridges for use in such arms. Undoubtedly, manufacturers of automatic pistols will soon develop recoil springs which will permit the use of Super-X Cartridges in their arms.
WESTERN CARTRIDGE COMPANY

Copy of an insert warning of the higher pressures that Super-X cartridges develop
