Franklin W. Olin, the founder of the Western Cartridge Company was born in 1860. His father was a timber cutter in a Vermont lumber camp. The younger Olin gained an engineering degree from Cornell University in 1886. After completion of his schooling, he worked in a patent attorney's office. Then he worked designing machines for the knitting industry. One of his inventions was the process of adding more thread to the toe and heel of socks to reduce wear. He gained experience in the powder industry by designing and building several powder mills in the eastern states.

F. W. Olin saw that the industrial needs of the United States in the post-civil war period was for black powder for use west of the Appalachian mountains. Black powder, or as it was called blasting powder, was the premier explosive of that day. The major user being the growing mining industry in the southern Illinois area. Moving to East Alton, Illinois, Olin worked with several other investors to create the Equitable Powder Company in 1892. Production started in 1893. Growing blasting powder demand allowed the company to grow. Equitable established mills near Fort Smith, Arkansas and Herrin, Illinois. Their sporting gun powder was in demand because this was the Western most company producing any type of powder for the Western trade.

To capitalize on the demand for sporting gun powder and loaded ammunition, Olin formed the Western Cartridge company in 1898. At first, Western only sold powder and loaded shotgun shells. They purchased most of their components from other manufacturers. The ammunition was loaded in machine which had been designed by Franklin Olin. As Western's sales grew the larger Eastern ammunition manufacturers attempted to squeeze out the new company by denying them the components required to load ammunition.

To stay in business, Olin was forced to become a supplier of his own components. He designed his own shotshell manufacturing equipment. He even created his own shot tower. His training as an engineer was beginning to pay off, plus his background in the knitting industry helped him understand accurate machines. His service working for a patent attorney probably helped him gain patent protection for his ideas.
For primers and blasting caps, he looked to a partnership with someone with chemical expertise. About 1902, Franklin Olin co-operated with the Austin Cartridge Company of Cleveland, Ohio to launch a small plant on the grounds of the Western Cartridge Company to produce metallic cartridges and blasting caps. This was the first production of .22 rimfire ammunition by Western. This new venture was named the Union Cap & Chemical Company. In 1909, Western purchased the assets of the Austin Cartridge Company and the Union Cap and Chemical Company's .22 boxes started to show the Western name.

The Western Cartridge Company purchased the National Cartridge Company in 1909. For a short period of time, they retained the format of the National Cartridge Company, but added the Western name to the side of the boxes. This placed the Western Cartridge Company firmly in the business of selling .22 rimfires, both under their own name, but also being a supplier to Sears and Roebuck, one of the nation's largest retailers. Yet the did not have their own brand identification, as their .22 boxes still carried the format of the Union Cap & Chemical Company or the National Cartridge Company.

The Western Cartridge Company was also growing in its ability to produce different types of powder. They were producing not only black powder, but smokeless and a semi-smokeless powder, which they called "Nublend". The semi-smokeless powders were dropped about 1916 and replaced with the "Lesmok", which they purchased from DuPont.

In 1910, Western created a new format for their cartridge product line, including the .22 rimfires. This new format is referred to as the Diamond Logo issues in reference to the diamond shaped logo in the center of the label. About the same time, a new headstamp was introduced, a diamond. This headstamp is 2-1 in the Kass headstamp guide.

The Western Cartridge Company's .22 rimfire product line expanded at a rapid rate, along with their centerfire offerings. Hollow point bullets were added. Offerings of .22 Remington and Winchester automatics were produced. Different loadings of the .22 Winchester rimfire were part of the product line. Smokeless powder produced by Western and "Lesmok" powder from DuPont were used in the loadings. By 1913, Western was a full line .22 rimfire producer.

The diamond logo issues remained in the product line until they were replaced with the "Bullseye" issues first produced in 1927. New developments were coming rapidly, including a dry lubrication of the bullets, which Western named "Lubaloy" and a non-corrosive priming compound.

The Western Cartridge Company had overcome many handicaps and was rapidly becoming one of the major manufacturers of all types of ammunition in the United States. While any corporate success is the result of the combined efforts of many people, it was the guiding genius of Franklin W. Olin who provided the spark to ignite the process.

Franklin W. Olin died in 1951 at the age of 91. At that time, his company had grown to employ more than 60,000 people, worldwide. His products range from powders and ammunition, to firearms, to drawn brass products and many more products needed to supply a country that was growing as fast as the Western Cartridge Company, his flagship.
Western Cartridge Co.

1908—MALTESE CROSS Issues

S-1

50 RIM FIRE .22 SHORT BLANK CARTRIDGES
Manufactured by The Western Cartridge Co. East Alton, Ill.

Loaded with a Special Grade of powder giving the loudest possible report.

S-2

50-22 CALIBRE SHORT RIM FIRE HIGH VELOCITY CARTRIDGES SWAGED BULLETS
The Western Cartridge Co. E. Alton, Ill.

THESE CARTRIDGES are made especially for fine target shooting and are guaranteed to give a higher velocity and consequently a longer effective range than any similar goods on the market.

S-3

50-22 CALIBRE SHORT RIM FIRE HIGH VELOCITY CARTRIDGES SWAGED BULLETS
The Western Cartridge Co. E. Alton, Ill.

THESE CARTRIDGES are made especially for fine target shooting and are guaranteed to give a higher velocity and consequently a longer effective range than any similar goods on the market.

S-4

50-22 CALIBRE SHORT RIM FIRE HIGH VELOCITY CARTRIDGES SWAGED BULLETS
The Western Cartridge Co. E. Alton, Ill.

THESE CARTRIDGES are made especially for fine target shooting and are guaranteed to give a higher velocity and consequently a longer effective range than any similar goods on the market.
About 1902, Franklin Olin co-operated with the Auston Cartridge Company of Cleveland, Ohio to form the Union Cap & Chemical Company right on the grounds of the Western Cartridge Company. This partnership was needed to supply the chemical expertise for the production of primers and blasting caps. At that time, the major ammunition manufacturers were attempting to squeeze Western out of business by denying them components. A natural evolution of business resulting in the In the Cap & Chemical Company producing .22 rimfire ammunition.

In 1908, Franklin Olin purchased the assets of the Auston Powder Company. From that time on, the Union Cap & Chemical Company's .22 rimfire boxes retained the older Maltese Cross format, but the Western Cartridge Company's name was added to the top of the box. In 1910, Western replaced this format with their own, then new, Diamond logo format.

S-1  **.22 SHORT (BLANK)**, Buff box with black printing. One-piece box without a tray. No product code. "7-1" h/s on a copper case. Various colored wads noted in each box. This box was probably produced even after the Diamond logo period started.

S-2  **.22 SHORT (HIGH VELOCITY)**, Red, green and black label with white and black printing. Buff, two-piece full cover box. Full wrap-around end label. No product code. "7-1" h/s on a copper case. Lead bullets.

S-3  **.22 SHORT (HIGH VELOCITY)**, Red, green and black label with white and black printing. Buff, two-piece full cover box. Full wrap-around end label. No product code. "7-1" h/s on a copper case. Lead bullets.

S-4  **.22 SHORT (HIGH VELOCITY)**, "SMOKELESS". Same as S-3, except the label is now green, red and yellow and the ends read "SMOKELESS".

1910—First DIAMOND LOGO Issues

BB-2.2

S-8

S-8A

S-8B

S-9
These were the first issues with Western's logo on them. They are called the "Diamond Logo" issues due to the diamond on the top label. This product line was the combination of the older National Cartridge Company and the Union Cap & Chemical Company .22 rimfires. Produced from 1910 to about 1927. During this period, many variations in powders, bullet finished and box construction are noted. Also, during this period, Western produced many private label issues for Sears and Roebuck.

The First DIAMOND LOGO series has “The Western Cartridge Co.” on the address line.

**BB-2.2 .22 B.B. CAPS.** "SMOKELESS". Buff box with black and red printing. BULLET BREECH and SMOKELESS in arc on top. Bulk packed box of 100 cartridges. One-piece box with top flaps. No product code.

**S-8 .22 SHORT.** "SMOKELESS NO-GREASE". This is a change in the label format from the above boxes. Green and white label with red and black printing. Buff, two-piece, full cover box. Full wrap-around end label. No product code. "2-1" h/s on a copper case. Lead bullets. End reads NO-GREASE. Label end has a Maltese cross on it.

**S-8A .22 SHORT.** "SMOKELESS, NO-GREASE". Same as S-8 but ends read NO-GREASE. **Note:** Maltese cross on the end.

**S-8B .22 SHORT.** "SMOKELESS, LUBRICATED". Same as S-8A, except for change in bullet lubricant callout on the ends of the label. **Note:** Maltese cross on the end.

**S-9 .22 SHORT.** “SMOKELESS LUBRICATED". Same as S-8, except for the change in bullet lubricant callout on the end, now stating LUBRICATED.
Western Cartridge Co.

1910—First DIAMOND LOGO Issues

L-1  **.22 LONG.** "NO GREASE. This is a black powder loading. Green and black label with white, red and black printing. Buff, two-piece, full cover box. Full wrap-around end label. No product code. "2-1" h/s on a copper case. Lead bullets. No bullet lubricant callout on the box ends.

L-2  **.22 LONG.** "LUBRICATED". Same as L-1 except both ends of the box states LUBRICATED.

L-7  **.22 LONG.** "NUBLEND". Green and black label with black and white printing. One-piece box with top hinged end flaps. No product code. Contents of box are unknown at this time. This box is a carryover from the Union Cap & Chemical Company production and is one of the only specimens known.

L-10.1 **.22 LONG.** "SMOKELESS NO-GREASE". Green and yellow label with red, white and black printing. Buff two-piece, full cover box. No product code. "2-1" h/s on a copper case. Lead bullets. "Trade Mark" under diamond on top.

In 1927, the Western Cartridge Company introduced their non-corrosive priming system. This was probably the most important development in the history of the .22 cartridge. It aids in preventing the rusting of the bore due to the salts in the older priming systems attracting moisture. Most older rifles have bore that are ruined due to using corrosive cartridges. with this new loading, a gun did not have to be cleaned after firing.

Western did not develop the non-corrosive primer. It was developed in Europe in the early 1920s and was first introduced in the U.S. market by the Remington Arms Co. in 1926. It was to the credit of Western that they were able to introduce non-corrosive priming just one year later. They were a much smaller company than Remington with the DuPont money behind them. Perhaps this explains why Western was able to grow into the Olin Corporation today, they were very good at what they did.

A new packaging style was introduced with the non-corrosive priming system, which today we know as the "Bullseye" boxes. This section of the catalog will be divided into 5 parts in order to catalog the various changes of the product during the product life of this package.

Also in 1927, Western introduced the "Lubaloy" bullet finish. This was a washing or plating of the lead bullet with copper The thinking behind this was to create a dry bullet finish. This was not a totally satisfactory development. It was found that this dry bullet finish created bore wear. A wax finish was offered at a later date to overcome this problem.

Western was the first to introduce dry bullet finishes. It was followed by the KopperKlads of Winchester in 1929 and the Gildkotes of Peters in 1929. Remington also introduced a dry bullet finish in 1930, but never pushed it very hard due to their worry about bore wear. Western and Winchester was the only manufacturers to retain the plated bullet for any length of time with modification.

In 1927, Western introduced their non-corrosive priming system. They also introduced a new format to their boxes to promote this new product. At first the two-piece full cover style of box of the prior issues was used, but this was replaced later on with the one-piece box with end flaps which will constitute a later issue in this catalog. See WCC-24 for the "Bullseye" Marksman issues.

S-1.1 **.22 SHORT**, "LESMOK POWDER". Like S-1 except different format to bottom.

WCC-4.2
In 1927, Western introduced a new bullet finish. This was a plating, or washing, of lead. They used no other type of lubrication. They called it a dry bullet finish. Most of the other manufacturers of .22 rimfires also introduced dry bullet finishes about this time, but rapidly dropped them due to reports of excess bore wear. Western retained the dry finish until the end of western branded cartridges in the early 1980s. They were forced to add a wax finish to them to resolve the bore wear problem.

The first of the non-corrosive LUBALOY loadings were placed in two-piece full cover boxes. These can be called the first issues and are the subject of this catalog listing. Later on they were replaced with one-piece boxes which will be the subject of a later listing.

S-1  **.22 SHORT.** "SMOKELESS POWDER". Blue, yellow and white label with red, white and black printing. Buff two-piece, full cover box. Full wrap-around end label. "B" bottom style. "2-1" h/s on a copper case. Copper washed lead bullet with 2K, IS. Variations noted:

1939- "BULLSEYE" Non-Corrosive "LUBALOY" Issues
(With wax Coated Bullets)

S-1

S-1 Bottom
About 1939, Western started cataloging and offering boxes marked WAX COATED on the top of the box. Due to the markings on the bottom of some of the prior issues boxes, it may be assumed that Western had been using some type of bullet lubrication for some period of time before they started marking the top of the boxes. Western SUPER-X boxes with the wax coated markings are common, but the Bullseye issues are rather difficult to locate with this marking.

**Note**: It was hoped that when this issue was submitted to the members as part of the check list program, that more boxes with the WAX COATED markings would be reported. They were not! Then one has to decide if this is a single box, or is part of a series, with the rest of the boxes being very rare.

In 1945 the boxes started showing Western to be a division Olin industries. The Bullseye style only remained in the line for a short period after this date. This issue was completely discontinued by 1947.

S-1 **.22 SHORT (BLANK).** Yellow and blue box with red, white and black printing. One-piece box without tray. Product code K1203R on side. "2-1" h/s on a copper case. White wad.

WA-1 **.22 WIN. AUTO.** "SMOKELESS LUBALOY BULLET". Yellow and blue box with red, white and black printing. One-piece box with end flaps. "2-1" h/s. Copper washed bullet. "1-C" bottom. Variations noted:
(a) Product code A22 on ends. Copper cases.
(b) Product code A22 on ends. Brass cases.

WA-2 **.22 WIN. AUTO.** "SMOKELESS LUBALOY BULLET". Similar to WA-1 except: Product code 1236R on sides. "LUBALOY" on top on left. Ends read COATED BULLETS.
(a) Copper case.
(b) Brass case

WA-3 **.22 WIN. AUTO.** "SMOKELESS LUBALOY BULLET". Similar to WA-2 except: Product code K1236R on sides. "LUBALOY" on top centered. Ends read LUBALOY BULLETS.
(a) Copper case.
(b) Brass case

WA-3.5 **.22 WIN. AUTO.** "SMOKELESS LUBALOY BULLET". WA-3 box with red warning overstamped on bottom. "2-1" h/s on copper case.
About 1947 the boxes started showing Western to be a division of Winchester-Western, Olin Mathieson Chemical Corporation.

WA-5 .22 WIN. AUTO. "SMOKELESS LUBALOY BULLET". Yellow and blue box with red, white and black printing. One-piece box with end flaps. "2-l" h/s. Copper washed bullet. “2C” bottom. Product code A22 on ends. “2-1” h/s on copper cases.
Introduced in 1931, this issue remained in the line until the end of Western production in 1980. The issue went thru different styles of boxes and company ownership changes. This issue will be cataloged by ownership series. This is a high speed issue made possible by new developments in powders. The X-PERT loading is a standard velocity loading introduced in 1937. For more advanced information please check “Western Cartridge Co. Super-X .22 Boxes, 1931-1960” www.22box-id.com/SX.php

ALL XPERT BOXES are located in section WCC-52

ALL GALLERY BOXES Are located in section WCC-49
Identifying Super-X boxes can be somewhat difficult. There are many small differences in tops, bottoms, and fonts. To hopefully ease identification we have divided the Super-X boxes in categories as follows.

"INDOOR GALLERY TARGET" Issues

S-1

These cartridges are made especially for fine target shooting and are guaranteed to give a higher velocity and consequently a longer effective range than any similar goods on the market.

S-2

Guaranteed sure fire and accurate, particularly adapted to target and gallery work. Thousands of shots can be fired without cleaning the rifle.

S-3

Guaranteed sure fire and accurate. Particularly adapted to target and gallery work. Thousands of shots can be fired without cleaning the rifle.

S-3.2

Guaranteed sure fire and accurate. Particularly adapted to target and gallery work. Thousands of shots can be fired without cleaning the rifle.

S-3.4

Guaranteed sure fire and accurate. Particularly adapted to target and gallery work. Thousands of shots can be fired without cleaning the rifle.
Western was late to the indoor gallery target shooting game and their Midwest location and, at that
time, localized distribution did not allow their ammunition to be used by most of the early shooting
galleries, which were located in the northeast section of the U.S.A.

It is not known if these were special loadings or just a different label added for marketing reasons.
Special Gallery loadings were generally produced for the true shooting galleries where shooters
gathered for competition and not for the late commercial galleries such as can still be noted at
amusement parks.

MALTESE CROSS ISSUES

This box still contains the format of the Union Cap and Chemical Company which was one of the
companies that Frank Olin purchased to form the Western Cartridge Company. This box style was
discontinued about 1910. This issue was loaded with black powder.

S-1  **.22 SHORT (TARGET)**. "GALLERY SPECIAL". Red, green and black label
with white and black printing. Buff, two-piece, full cover box. Full wrap-around
end label. "N-1" h/s on a copper case. Lead bullets.

DIAMOND LOGO ISSUES

This box style was produced from about 1915 to 1926. The Gallery Specials were continued into
this era. Lesmok powder and Nublend powders were added to the product offering. Nublend was a
semi-smokeless powder developed for the National Cartridge Company.

S-2  **.22 SHORT (TARGET)**. "NUBLEND GALLERY SPECIAL". Green and black
label with black and white printing. Buff, two-piece, full cover box. Full wrap-around
end label. "2-1" h/s on a copper case.

S-3  **.22 SHORT (TARGET)**. "GALLERY SPECIAL". Green and black label with
red, white and black printing. Buff, two-piece, full cover box. Full wrap-around
end label. "2-1" h/s on a copper case. Lead bullets. This was probably a black
powder loading.

S-3.2 **.22 SHORT (TARGET)**. "GALLERY SPECIAL". Same as S-3 but MFGD BY
was added to the top.

S-3.4 **.22 SHORT (TARGET)**. "GALLERY SPECIAL". Same as S-3.2 but no THE on
the Western signature line on bottom.
Western Cartridge Co.

"INDOOR GALLERY TARGET" Issues

S-3.6 .22 SHORT (TARGET). "GALLERY SPECIAL". Same as S-3.4 but smaller font used on bottom.

S-3.8 .22 SHORT (TARGET). "GALLERY SPECIAL". Same as S-3.6 but different font used on bottom.

S-4 .22 SHORT (TARGET). "LESMOK GALLERY SPECIAL". Green and black label with red, white and black printing. Buff, two-piece, full cover box. "2-1" h/s on a copper case. Lead bullets.

S-5 .22 SHORT (TARGET). "LESMOK GALLERY SPECIAL". Similar to S-4 except LESMOK Powder and MFGD BY has been moved

1927 NON-CORROSIVE ISSUE

In 1927 Western introduced the first of their non-corrosive primed .22 rimfires. At that time they switched from a two-piece to a one-piece box. They also introduced a new format to their package which the collectors refer to as the "bullseye" issues.

It would seem that for a short period of time they continued their "Gallery Special" loadings. Boxes are somewhat rare, so they could not have been produced too long before they were discontinued. The indoor target era was changing and the need for this issue just wasn't there. The use of the .22 short was rapidly losing favor. Indoor shooters were starting to use the .22 long rifle cartridge.

S-6 .22 SHORT (TARGET). "SMOKELESS GALLERY SPECIAL". Yellow, blue and white box with red, black and white printing. White over label with black printing. One-piece box with end flaps. No product code. "2-1" h/s on a copper case. Lead bullets. No end flap warning.
Western Cartridge Co.

"COMMERCIAL GALLERY" Issues

Bottom "A"

Bottom "B"

Bottom "C"

Bottom "D"

Bottom "E"
The Indoor gallery offhand era of the 1800's grew into the Indoor Schuetzen era as the rifle and ammunition became more accurate. During the 1900's, gallery shooting did not go away, but moved to the amusement parks and the county fairs. There you paid 25 cents for 5 shots from a slide action Remington or Winchester rifle. Instead of winning a metal, you won a teddy bear for your favorite girl.

The need was not for highly accurate loading for this sport, but low cost ammunition. There was also a need for a bullet that would not bounce back from the metal backstop, but would spatter on it. It would not be sporting to injure the shooter while he was paying good money to use your equipment. Western responded to this need with their line of special amusement park gallery issues which they named KANT-SPLASH. First introduced in 1932, they remained in the product line until the 1960's.

The bullets were produced from a pressed composition material that would spatter or break up on impact. Many different bullet finishes and lubrications were used over the years. Nickel washed cases were used to denote the KANT-SPLASH loading during the early years.

S-1

1932 "BULLSEYE" NON-CORROSIVE ISSUES

The first of the KANT-SPLASH issues used the then current "Bullseye" non-corrosive format of that period. While most of the gallery issues were bulk packed, some of the early boxes were packed 50 to a box. The composition bullets were finished with Western's then new LUBALOY finish. This was a copper plating of the bullet. The bullet weight was 29 grains.

S-1 .22 SHORT (GALLERY). "KANT-SPLASH". Blue, yellow and white box with red, white and black printing. One-piece box with end flaps. "2-1" h/s on a blackened nickel case. Product code K1211R on the side. Composition bullet with 2K,1S. Variations noted:
(a) "A" bottom. End flap CAUTION DANGEROUS WITHIN 1 MILE.
(b) "B" bottom. End flap CAUTION DANGEROUS WITHIN 1 MILE.
(c) "C" bottom. End flap RANGE 1 MILE BE CAREFUL.
(d) "D" bottom.

1945 ISSUES -

After the end of world War II, in 1945, Western redesigned the format of their product line. The KANT-SPLASH name was maintained, but the appearance was changed. The box now stated that Western was a Division of the Olin Corporation. The packaging size was reduced from 1,000 rounds down to 500 rounds.

S-8  **.22 SHORT (GALLERY), "KANT-SPLASH LUBRICATED DISINTEGRATING BULLETS".** Bulk packed box of 500 rounds. Blue and yellow box with red, white and blue printing. "2-1" h/s on a copper case. Composition bullets. Variations noted:
(a) Product code K1210R on the top. Box bottom states Western Cartridge Company Division of Olin Industries.
(b) Product code KS22S on the top. Box bottom states Western Cartridge Company Division of Olin Industries.

S-10 **.22 SHORT (GALLERY), "KANT-SPLASH GREASED DISINTEGRATING BULLETS".** Same as S-8 except for change in bullet finish callout. The nickel plated cases has been blacked out. The box bottom states Western Cartridge Company Division of Olin Industries.

1955 ISSUE

During the 1955 period, Western introduced a new loading for their KANT-SPLASH gallery issue, which they named SUPER KANT-SPLASH. The new loading used a 15 grain composition bullet which broke up better on the metal backstop. A new box format was introduced. These boxes were marked with the Olin-Mathieson name.

S-12 **.22 SHORT (GALLERY), "SUPER KANT-SPLASH".** Bulk packed box of 500 rounds. Blue and yellow box with red and black printing. One-piece box with top and bottom flaps. Product code SKS22S on the bottom. Box is empty, so contents are unknown.

LR-1.5 (SIDE)
Western Cartridge Co.

The "MARKSMAN" Issues

Western was a late entry to the smallbore rifle match game. Their first specialized match loading was introduced in 1922, which they named "Marksman". All of the other major manufacturers had been producing very accurate .22 rimfire ammunition for at least three years prior to Western's entry into this market.

They used "Lesmok" powders. This must have been a difficult decision to use the powder of a competitor DuPont. Western was not producing semi-smokeless powders. They also worked very hard to develop good priming compounds and the manufacturing processes required to produce uniform cartridge performance.

EARLY BOXES

What is judged to be the first "Marksman" loadings were issued in boxes with the diamond logo label which was the standard packaging of the Western .22 rimfires during the early 1920's. A side label was applied to the side of those boxes stating that these were "Marksman" loadings.

LR-1 .22 LONG RIFLE (TARGET). "MARKSMAN". Green and black label with black printing. Buff, two-piece, full cover box. Full wrap-around end label. No product code. Yellow and red label with red and black printing added to the side of the box. Box is sealed, so contents are unknown.

LR-1.5 .22 LONG RIFLE (TARGET). "LESMOK—MARKSMAN". Same as LR-1 but Lesmok.

Bottom & End
1922 ISSUES

The first specialized boxes for the "Marksman" issues were introduced in 1922. First issued in a high velocity loading which was reported to have a muzzle velocity of over 1200 feet per second. This velocity was achieved by loading 3.1 grains of "Lesmok". In 1925, they reduced the velocity to 1100 feet per second. This was still about 60 feet per second faster than the match grade loadings of competitors. These were primed with a corrosive compound. Non-corrosive priming compounds were not introduced in the U.S. until 1926.

LR-2.5 **.22 LONG RIFLE (TARGET).** "MARKSMAN". Same as LR-3 except labels have a gray background.

LR-3  **.22 LONG RIFLE (TARGET).** "MARKSMAN" Light green and red label with blue printing. Buff, two-piece, full cover box. Full wrap-around end label. No product code. Box is sealed so contents are unknown at this time. "B" bottom.' This label style seems to have been discontinued in 1927.

LR-4  **.22 LONG RIFLE (PRIMED SHELLS).** "MARKSMAN". Buff, two-piece full cover box with blue printing. "2-1" h/s on a copper. Case. Produced for the Schuetzen shooters who desire to load their own.

The "MARKSMAN" Issues

1927 ISSUES

In 1927 Western introduced their non-corrosive priming compound. At that time, they changed the format of their labels to what is referred to as the "Bullseye" label. During the same year, they also introduced their dry bullet finish, which Western called "Lubaloy". They also started using smokeless powders, as well as "Lesmok" for their match grade loadings.

LR-5  **.22 LONG RIFLE (TARGET)**. "LESMOK MARKSMAN". Blue, yellow and white label with black, white and red printing. Buff, two-piece, full cover box. Full wrap-around end label. No product code. Contents are unknown at this time. "C" bottom.

1931 ONE-PIECE BOX ISSUES

In 1931 Western replaced their two-piece, full cover box with a one-piece box with end flaps. By this time both the smokeless powders and the "Lubaloy" bullets had been dropped from the "Marksman" loadings. The shooters preferred "Lesmok" powder and the dry bullet finishes were found to foul the bores.

LR-8 **.22 LONG RIFLE (TARGET), "LESMOKE LUBALOY MARKSMAN"**. Yellow, blue and white box with black, red and white printing. One-piece box with end flaps. No product code. "2-1" h/s on a copper case. Copper washed lead bullet. "H" bottom.

LR-9 **.22 LONG RIFLE (TARGET), "LESMOKE MARKSMAN"**. Yellow, blue and white box with black, red and white printing. One-piece box with end flaps. No product code. "2-1" h/s on a copper case. Lead bullets. "F" bottom.

LR-11 **.22 LONG RIFLE (TARGET), "LESMOKE LUBALOY MARKSMAN"**. Same as LR-8 except for a different format to the top of the box. NON-CORROSIVE PRIMER has been added before LESMOKE POWDER.
In 1933, Western introduced a new outdoor match grade loading. They selected the name "Supermatch" for this issue. This was a, non-corrosive primed, smokeless powder loading combined with a 40 grain, copper plated lead bullet. The copper plating was dropped soon after introduction. A new style of packaging was introduced.

"Supermatch" remained in the product line until 1982. During that time, it underwent many changes, with the name being changed from time to time by calling it "Supermatch Mark II", "Supermatch Mark III", etc. A special loading designed for pistol shooters was introduced in 1960, which they called "Supermatch Mark IV". The bottoms of the boxes was changed as new processes were developed or ownership of the company was changed. The attempt is to display these products as they were developed.
The first of the "Super Match" family was introduced in 1933. Western was still convinced that their copper plating of lead was producing excellent results. They trade-marked this process "Lubaloy". They already knew that this process was creating fouling of the bore, so it will be noted that they were adding lubrication to the bullets of their "Super Match" issue.

When first introduced this loading produced a muzzle velocity of 1250 feet per second. This is still well above the speed of sound. Most manufacturers were finding lower velocities were producing better accuracy. Western was relying on their manufacturing expertise to produce match grade ammunition. They had developed processes which improved their quality control methods so that they were better able to control the velocity variations from round to round. The "Super Match" was dropped from the product line in the early 1940's, leaving the Mark II and the 'Mark III to carry on the name.

**LR-1** **.22 LONG RIFLE (TARGET).** "SUPER MATCH LUBALOY COATED LUBRICATED BULLETS". Yellow, white and blue box with red, black and yellow printing. One-piece box with end flaps. No product code. "2-1" h/s on a copper case. Copper plated lead bullet. "A" bottom. This loading was discontinued in 1933, which makes it a issue with a very short life. #2 end flap.

**LR-1.5** **.22 LONG RIFLE (TARGET).** "SUPER MATCH LUBALOY COATED GREASED BULLETS". Yellow, white and blue box with red, black and yellow printing. One-piece box with end flaps. 2-1" h/s on a copper case. Copper plated lead bullet. "AA" bottom.

**LR-2** **.22 LONG RIFLE (TARGET).** "SUPER MATCH". Yellow, white and blue box with black, red and yellow printing. One-piece box with end flaps. No product code. "2-1" h/s on a copper case with 1K. Lead bullet with 3K,IS. "B" bottom. This box now just calls out a 40 grain lubricated bullet...

LR-1

"T" Bottom

"U" Bottom
The Western Cartridge Company was late with a .22 rimfire loading for the competitive pistol shooters. Remington and Peters started selling special pistol loadings in the late 1930's. Western considered their "XPERTs" to be good for all shooters, including the hand gunners.

However, in 1960, Western did introduce their "Mark IV" issue. It featured a different wax lubricant than the rifle ammunition. It was designed not to clog the feed ramps in autoloading pistols. It was also a harder wax which would not transfer to the hand during reloading operations. "Mark IV" was produced from 1960 to the present time. During that time period, different box bottoms and end flap warnings will be noted, as well as the box style changes over the years.

**1960 Box Issues**

S-1
"SUPER MATCH GOLD AND SILVER"

This issue was perhaps one of the best match grade loadings ever produced by any U.S. manufacturer. Produced in a new special match facility to rigid specifications. First introduced in 1975 and discontinued in 1982. The "Silver Match" was considered as a lower grade match loading but was never placed into the product line.

LR-1  **.22 LONG RIFLE (TARGET).** "SUPER MATCH GOLD". Gold box with red and black printing. One-piece box with end flaps~ Product code SM22G on the ends. "W-3" h/s on a brass case with lK. Lead bullets with 2K, lS. This box with this style of warning on the top was produced from 1975 to 1978. "xx" bottom.

LR-2  **.22 LONG RIFLE (TARGET).** "SUPER MATCH GOLD". Same as LR-1 except a different style of warning on the top. This style was produced from 1978 to 1982. "YY" bottom.

LR-3  **.22 LONG RIFLE (TARGET).** "SUPER MATCH SILVER". Silver box with red and black printing. Printers proofs are the only box available at this time, so details of the round are unknown.

"SUPER MATCH MISC"

In the late 1950's interest was growing in the international style of rapid fire pistol shooting. Most manufacturers responded by introducing special loadings in a .22 short case. This never became a major sport and as interest dropped off, the manufacturers dropped this loading from their product lines.

These are the issues that do not fit into any of the prior classifications. Some were produced for the Army Marksmanship Unit or were experimental.

S-1  **.22 SHORT (EXPERIMENTAL-TARGET).** "SUPER MATCH". White label with black printing. This is a label from an experimental loading using an enlarged .22 short case with a lead bullet. This is a box of proof loads. "2-1" h/s on a red based brass case. Lead bullet with 0K,0S. Bullet is stained red. Reported to have been produced in the 1950's for a special international match pistol, details of which are unknown at this time.

S-3  **.22 SHORT (TARGET).** "SUPER MATCH". Same as S-2, except for a different style of printing and format on the box top. "2-1" h/s on a nickel washed brass case. Lead bullets. Variations noted:
(a) White box.
(b) Kraft colored box.

LR-1  **.22 LONG RIFLE (TARGET-PRIMED SHELLS).** "SUPER MATCH". Buff box and label with black printing. Two-piece, half-split box. Full wrap-around side and end labels. Lot. 58HK31. "2-1" h/s on a copper case. Primed and loaded with powder. Sealed with a red or blue card wad.

LR-2  **.22 LONG RIFLE (TARGET).** White box with black printing. One-piece box with end flaps. No product code. "2-1" h/s on a brass case with 1K. Lead bullet with 2K,1S. Bullet has same profile as a Super Match Mark IV, but with a slightly shorter nose. This was some type of experimental pistol loading.

LR-3  **.22 LONG RIFLE (TARGET-DUMMY).** "SUPER MATCH MARK IV". White box with black printing. One-piece box with end flaps. Top only has printing. No product code. "2-1" h/s on a nickel plated brass case with a hole in the head. Lead bullets with 2K,1S.

LR-4  **.22 LONG RIFLE (TARGET).** "SUPER MATCH MARK IV FOR PISTOL". White box with black printing. One-piece box with end flaps. No product code. "2-1" h/s on a nickel plated brass case. Lead bullets with 2K,1S. Note: Purple printing also noted.
1937 ISSUES

The first of the "XPERT" issues used a format which was basically the same as the "Super X" high velocity issues that were then current. This style of box remained in the product line until replaced in 1960.

S-1 **.22 SHORT (TARGET), "XPERT"**. Yellow and blue box with blue and red printing. One-piece box with end flaps. "2-1" h/s on a brass case. Lead bullet with 2K,1S. Variations noted:

(a) "A" bottom. 87-M on left flap only. Code K1262R on front. Ends read LEAD LUBRICATED.

(aa) "A1" bottom. 87-M on left flap only. Code K1262R on front. Ends read LEAD LUBRICATED.

(b) "B" bottom. #1 end flap warning. Code K1262R on front. Ends read LEAD GREASED.
In 1937, Western introduced an intermediate velocity target loading designed to sell at the price of regular ammunition. They called this new offering "XPERT". Smokeless powder was loaded into a brass case. The bullet was 40 grains of lead and was either greased or waxed. Winchester, which at this time was owned by Western introduced their "LEADER", which was the same thing as the "XPERT", in 1938.

This loading was never designed to be a long range outdoor prone cartridge. It produced good results indoors and was a low cost practice round for the outdoor shooter. Produced for over 30 years, many box bottom variations and box format changes are to be noted.

(c) "Bl" bottom. #1A end flap warning. Code K1262R on front. Ends read LEAD GREASED.

(d) "C" bottom. #2 end flap warning. Code K1262R on front. Ends read GREASED.
(e) "D" bottom. #2 end flap warning. Code K1262R on side. Ends read GREASED.

(f) "D" bottom. #2 end flap warning. Code XP22S on the ends.

(g) "E" bottom. #2 end flap warning. Code XP22S on ends.
S-2  **.22 SHORT (TARGET), "XPERT"**. Same as S-1 but with red over-stamp stating “"FOR DISPLAY PURPOSES ONLY. NOT FOR PACKING".”

S-3  **.22 SHORT (TARGET), "XPERT"**. Same as S-1 but with black over-stamp stating "SOLD FOR EMPLOYEES USE ONLY".
In 1960 Western updated the packaging styles of the entire product line including the .22 rimfires. The old blue and yellow box was replaced with a solid yellow box. The loading itself seems to have been unchanged.

S-2 **.22 SHORT (TARGET), "XPERT".** Yellow box with red, white and blue printing. One-piece box with end flaps. Product code XP22S on the ends. "2-1" h/s on a brass case. Lead bullets with 2K,1S.

(a) "F" bottom. #3 end flap Warning.

(b) "F1" bottom. #4 end flap Warning
In 1962 the Consumers Products Safety Commission required all boxes of .22 rimfire cartridges to display a warning about children. Western added this warning to the top of their boxes. This box style remained in the product line until 1971 when it was replaced with the "T22" issues.

**S-3 .22 SHORT (TARGET), "XPERT".** Yellow and white box with red, white and blue printing. One-piece box with end flaps. Product code XP22S on the ends. #4 end flap warning. "2-1" h/s on a brass case. Lead bullets with 2K,1S. "G" bottom.

**S-3 .22 SHORT (TARGET), "XPERT".** S-3 box with black over-stamp stating EMPLOYEES USE ONLY
L-l  **.22 LONG (TARGET)**, "XPERT". Yellow and blue box with blue and red printing. One-piece box with end flaps. Product code K1263R on the side. "2-1" h/s on a brass case. Lead bullet with 2K,IS. "H" bottom. No end flap warning. Ends read LUBRICATED LEAD BULLET. The long loading was dropped from the product line in 1945.
1937-1945 “XPERT” Issues

Western Cartridge Co.

(a) 88 M on right flap only. 3 patents on bottom.

(b) 88 M on right flap only. 4 patents on bottom

(c) 3 patents on bottom.
LR-1  **.22 LONG RIFLE (TARGET).** "XPERT". Yellow and blue box with blue and red printing. One-piece box with end flaps. "2-1" h/s on a brass case. Lead bullet with 3K,1S.

(a)  "1" bottom. 90M on left flap. Code K1264R on side. Ends read LUBRICATED LEAD BULLET.

(b)  "J" bottom. #2 end flap warning. Code K1264R on side. Ends read GREASED LEAD BULLET.

(c)  "K" bottom. #2 end flap warning. Code K1264R on side. Ends read GREASED.
(cc) "K1" bottom. #2 end flap warning. Code K1264R on side. Ends read GREASED.

(d) "L" bottom. #1 end flap warning. Code K1264R on side. Ends read GREASED LEAD BULLET.

(e) "M" bottom. #1 end flap warning. Code K1264R on side. Ends read GREASED LEAD BULLET.

(ee) Same as (e) but with #2 end flap warning.
Western Cartridge Co.

1937-1959 "XPERT" Issues
LONG RIFLE

(f) "N" bottom. #2 end flap warning. Code K1264R on side. Ends read GREASED.

(ff) "X" bottom. Similar to "(f)" but wording on 2nd, 3rd and start of 4th line is different.

(g) "O" bottom. #2 end flap warning. Code K1264R on side. Ends read GREASED.

(gg) "O" bottom. #2 end flap warning. Code XP22LR on side. Ends read GREASED.
(h) "O1" bottom. #2 end flap warning. Code K1264R on side.

(j) "P" bottom. #2 end flap warning. Code XP22LR on ends. Ends read GREASED.

(k) "R" bottom. #2 end flap warning. Coda XP22LR on ends. Ends read LUBRICATED.
Western Cartridge Co.

1937-1959 "XPERT" Issues
LONG RIFLE

(l) "O" bottom. #2 end flap warning. Ends read GREASED and code XP22LR.

(m) Same as (l) but different shape warning flap.

(n) "W" bottom. #1 end flap warning. Code K1264R on front. End reads GREASED LEAD BULLET.
Western Cartridge Co.

The "XPERT TARGET" Issues

1960 ISSUES

LR-2  **.22 LONG RIFLE (TARGET), "XPERT"**. Yellow box with red, white and blue printing. One-piece box with end flap. Product code XP22LR on the ends. #3 end flap warning.

(a)  "T" bottom.

(b)  Same as “a” but with "U" bottom.

LR-2.5  **.22 LONG RIFLE (TARGET), "XPERT"**. Same as LR-2 but has an unidentified red stripe on the top.
Western Cartridge Co.

The "XPERT TARGET" Issues

1962 ISSUES

LR-3  .22 LONG RIFLE (TARGET). "XPERT" Yellow and white box with red, white and blue printing. One-piece box with end flaps. Product code XP22LR on the ends. #4 end flap warning. "2-1" h/s on a brass case. Lead bullets with 3K,1S. "V" bottom. Variations noted:
(a) Back "A" (no case cannelure)
(b) Back "B". (cannelure on case)

Back "A"  
Back "B"

These 22 Long Rifle XPERT van fire cartridges, loaded with non-corrosive priming and smokeless powder, will not cause rust or corrosion. Due only to arms in good condition designed for this cartridge. We warrant the exercise of reasonable care at the manufacturing of these cartridges, both make and no other warranty expressed or implied.

1971 "T22 TARGET" Issues

S-1

S-1.5

LR-1

LR-1.5

WCC-53A
In 1971 Western replaced their "XPERT" issues with a new offering which they named "T22". This issue used Western's Ball powder behind a 40 grain lead bullet. The bullet lubricant was improved. This was not a replacement for high accuracy outdoor match loadings, but was a good indoor target cartridge.

The "T22" was maintained in Western's product line until the present day, under the various brand names, Winchester-Western and then, just Winchester. At this time it is the only rifle target loading in the product line.
